HASTINGS INSTRUMENTS INTRODUCES DROP-IN REPLACEMENT FOR TYLAN'S FC-280

Hastings Instruments has recently announced the availability of XFC-202, a version of their core flow product, which can be used as a drop-in replacement for other instruments. The company has designed its standard HFC-202 flow controller in order that the mounting holes, length and width dimensions match that of the Tylan FC-280 instrument.

The XFC-202 is ideally suited for those customers who are searching for a flow controller that may be used in existing designs without modification to package constraints. As a re-packaged HFC-202, the drop-in product has performance features that are described in the company's HFC-202 product bulletin.

Hastings Instruments, a business unit of Teledyne Instruments, develops, designs, and manufactures a complete line of instruments for precise measurements and control of vacuum pressures and gas flows. For more information on the Tylan drop-in or on any Hastings instrument, contact Charlie Fulmer at Teledyne Hastings Instruments. Write: P.O.
